

GETTING STARTED

Welcome to Cablelabs' Developer Portal. Learn how to access the APIs, use the API navigation tool, access and interact with the underlying model and utilize the community forums.

INTERACTING with the ENTITIY MAP

All the modeling for the APIs is done through Visual Paradigm housed in a Vpository account.

To access the model and start interacting:

1. Download and install [Visual Paradigm](#).
2. [Request](#) access to the vpository account, which is the central store of the models.
3. Follow these steps, to setup visual paradigm and link the vpository account.

1. Make sure the version of your Visual Paradigm is 11.2 or higher

Run Visual Paradigm. Open the About window (Help > About) and check the installed version. Make sure you are using the following versions of products, or a higher version.

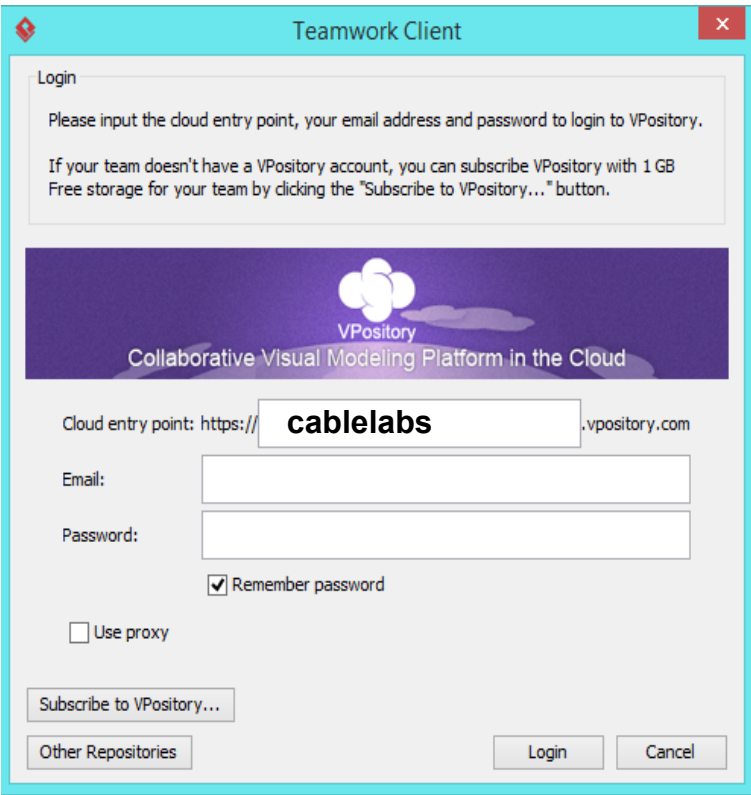

If you are running an earlier version and are entitled to version 11.2, or any higher version, please consider upgrading. If your maintenance has expired, please consider renewing it to enjoy our product upgrades.

2. Connect to VPository

Open Teamwork Client (by selecting "Teamwork > Teamwork Client" from the menu). Choose VPository. Enter the Cloud entry point (**cablelabs**), email, password and click Login.

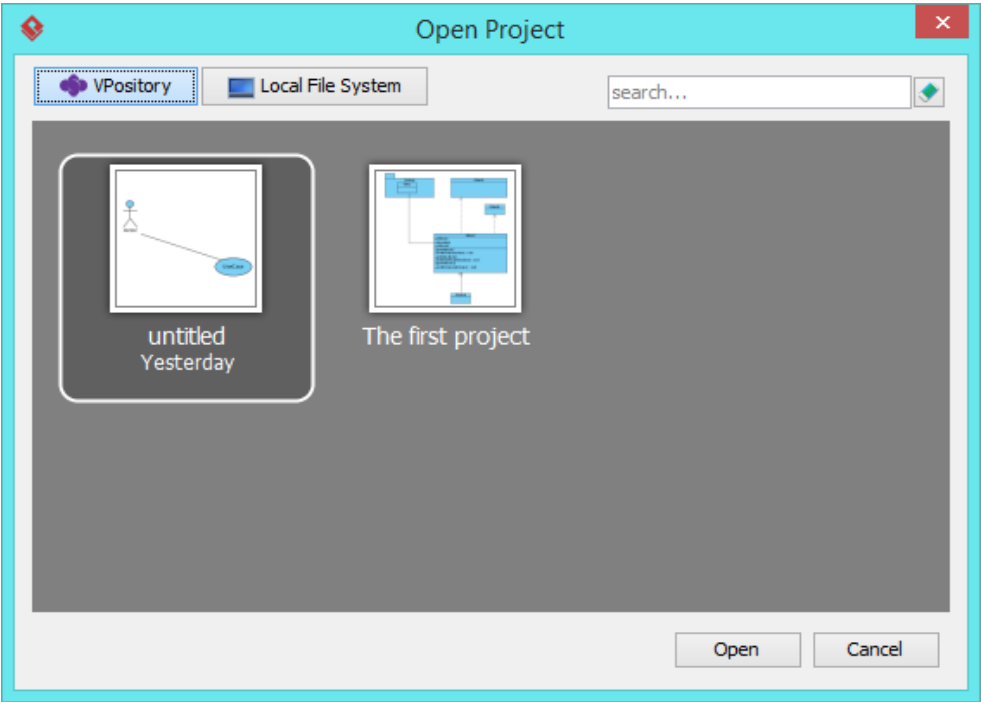

We recommend you work on a new workspace if you are already connecting to an existing server repository.

3. Getting Started

Open Teamwork Client (by selecting "Teamwork > Teamwork Client" from the menu). Choose VPository. Enter the Cloud entry point (**cablelabs**), email, password and click Login.

We recommend you work on a new workspace if you are already connecting to an existing server repository.
