

# GETTING STARTED

Welcome to Cablelabs’ Developer Portal. Learn how to access the APIs, use the API navigation tool, access and interact with the underlying model and utilize the community forums.

## UTILIZING the COMMUNITY FORUMS

The community forums allow you to interact with any user on the portal. While in the forums you can you will have the ability to inidividually discuss topics with an individual user, or open your discussions for the entire user community.

**QUICK TIPS:**

- To notify specific users about a recent post, use ‘@’ followed by the user’s name to send a notification to that user.
- Have questions for the CableLabs Data & Information Architecture team? Use @dia-team to notify team members.
- Use the RSS Feed within each forum to subscribe in order to be notified of any new posts or comments. Only interested in a specific topic in a forum? Click the “watch” icon to follow specific topics.
- Update notification preferences under the “settings” section under your profile.
